

# Version 4

## Update news

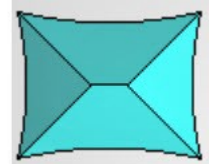

MPanel product development is driven by requests from you, our users.

Version 4 update is a feature packed example with requested new features and upgrades. Please keep the ideas coming—we're always happy to learn new ways our products can help you. Email us at [support@mpanel.com](mailto:support@mpanel.com).

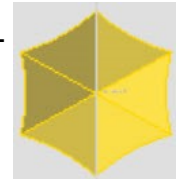

## New Shade Structures

For the past 3 years we refined InSite to be the best shade sail design and selling tool available. To make the program even more powerful we've added 2 new shade structures you can add to your design proposals:

1. Framed shade structures - aka hip and ridge, span shades (they have lots of different names) are now part of InSite. We have both rectangular as well as multi-sided structures. The models are parametric so you can add a full 3D model with 2 mouse clicks then change its size to suit your design needs—all in seconds.

2. Umbrellas: again we have both rectangular as well as multi-sided structures. The models are parametric so you can change sizes, number of segments, fabric brand and color all in seconds.

**Framed Shades**

**Umbrellas**

## New Report Generator

A powerful new report generator engine has been added to InSite with higher quality reports, new report pages, and the option to add custom report pages—let us know if you would like a new or a custom report template made.

**Report Generator**

## New and Upgraded Tools

- Poles, Umbrellas, Framed Shades can be located by x,y co-ordinates
- Visualization now includes ground plane and north arrow
- Layout pages now include minimum canopy heights
- Program remembers window size and position with multiple displays

We trust you will enjoy these new features and that they will benefit your company.

Thank you for your continued support and we again, encourage you to provide feedback and suggestions for improvements.
