# Version 5
Update news

MPanel product development is driven by requests from you, our users.

Version 5 update is a feature packed example with requested new features and upgrades. Please keep the ideas coming—we're always happy to learn new ways our products can help you. Email us at support@mpanel.com.

New Arched Shade Structures

1. Single pole arched shade structures - often referred to as cantilever carpart shade or seating shade (they have lots of different names) are now part of InSite. The models are parametric so you can add a full 3D model with 2 mouse clicks then change its size to suit your design needs—all in seconds.

2. Two pole arched shade structures : often referred to as barrel vault structures used in many different applications The models are parametric so you can change sizes, number of bays, fabric brand and color all in seconds.

New floating "Fixed Point"

- New "Fix Point" provides a floating shade sail connection point which is ideal for roof or similar non-post sail connections.

Other great new features

- New field added for site address (added to updated Visualization reports)
- Move grid allows grid alignment to ground image reference
- New opacity adjustment for sails and poles added to view settings
- New site and projected area of selected sail/shade added to information properties
- New Umbrella property to hide pole allowing user to draw a side pole in design
- New shadow report pages with color background and shade outline or with fabric color and assigned opacity
- New report Layout Detail template with sail/post layout, pole and sail numbers and a table of sail connection heights
- Shadow report templates now include options for color background and sails

We trust you will enjoy these new features and that they will benefit your company.

Thank you for your continued support and we again, encourage you to provide feedback and suggestions for improvements.
