

# SOFTWARE FOR TENSILE FABRIC STRUCTURE DESIGN PROFESSIONALS

### What is MPanel FEA software?

MPanel FEA software is a comprehensive set of engineering tools that assist a user with the design and analysis of tensile fabric structures and industrial fabric materials under environmental conditions such as wind and snow. It acts as a floating application inside AutoCAD or Rhino 3D.

MPanel FEA connects a powerful Finite Element Analysis engine with an easy to understand user interface, to provide a robust solution to non-linear large displacement FEA. The MPanel interface reads a standard Mpanel drawing and builds an FEA model ready for analysis. Next, the solver is run to determine the model displacements for the load conditions, such as wind effects and snow cover.

MPanel & MPanel FEA work with AutoCAD and Rhino3D CAD platforms

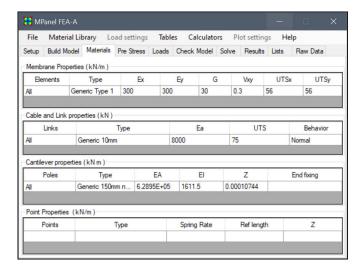

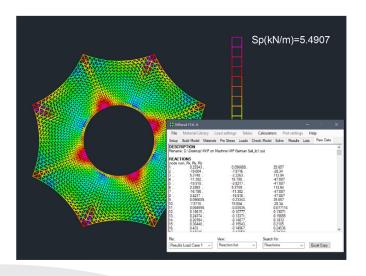

# **Robust Solver**

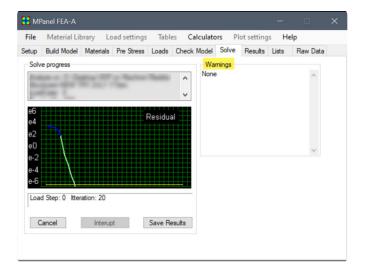

The powerful industry leading non-linear solver is fast and robust. Able to solve models with loose fabric and zones of zero stress and provides feedback of problems.

# **Define Materials**

Specify the type of fabric and cable diameters along with a Pre-Stress to determine initial reactions.

Add environmental factors such as Wind and Snow to determine stresses, reactions and test loading capacity.

# Plot or export to Excel

Results are provided in both graphical on the screen as well as in raw tabular data for use in MS Excel or import into other structural applications.
