

Version 6

Update news

MPanel product development is driven by requests from you, our users. Version 6 update is a feature packed example with requested new features and upgrades. Please keep the ideas coming—we're always happy to learn new ways our products can help you.

Email us at support@mpanel.com.

New Model Library Tool

This powerful new tool allows users to save multiple shade sail designs (assume a commonly used design) for later re-use. This will help speed up preparation of design proposals for clients.

Models are treated as blocks which can be moved, rotated and scaled larger or smaller in all dimensions independently.

If changes are required to post heights, sail colors etc. then the block can be exploded to become a normal InSite model.

New Select Tool

The Select tool allows the user to select groups of elements e.g. poles, sails, walls etc. with a single click allowing:

- assign property changes to the group
- change colors etc.

Other great new features

- New project button option to preserve current project information
- Invalid character and format checking for all distance measurement fields
- PropertyGrid validation for Lat and Long added
- Undo/Redo tool combined into one button to save ribbon space
- File open button includes list of most recent files used.
- Most recent Library models shown in tool menu.

We trust you will enjoy these new features and that they will benefit your company.

Thank you for your continued support and we again, encourage you to provide feedback and suggestions for improvements.
