Version 15
Update news

Version 15 is another product upgrade packed with new features focused around fabric pattern tools driven by your requests and user feedback.

Please keep the ideas coming—we're always happy to learn new ways our products can help you. Email your ideas, feedback and requests for improvements to support@mpanel.com

Fabric panels can now be rotated and moved

Panels and Reo patches can now be moved and rotated in fabric pattern view. This allows panel edges to be aligned with seams instead of current fabric centerline and "hand nesting" of panels inside the cyan roll lines.

Reo patches shown in pattern view

Reo patches now include corner labels as well as the corner reaction angle shown as a line and these are visible on the pattern tab.

Dimensions can be hidden

Dimensions and labels can be shown or hidden with a toolbar button on the patterns tab which allows closer "hand-nesting" prior to export.

Other updates/changes

- Mid connections now included in reports
- Improvements in panel mapping and reports of fabric length
- Corrections to fabric colors for Ferrari database

What's new

With all new releases please check the "What's new" page of the help file for more details of new features including video links.

We trust you will enjoy these new features and that they will benefit your company.

Thank you for your continued support and we again, encourage you to provide feedback and suggestions for improvements.
