

# Version 7

## Update news

MPanel product development is driven by requests from you, our users. Version 7 update is a feature packed example with requested new features and upgrades. Please keep the ideas coming—we're always happy to learn new ways our products can help you. Email us at [support@mpanel.com](mailto:support@mpanel.com).

### New Add constrained pole

Add constrained pole allows poles to be added based on a specified distance from an anchor and includes optional orthogonal lock

### “Fixed Point” upgraded to “FlexPoint”

New FlexPoint can be fixed or floating which simplifies building complex sails such as 3 or more connections on one side and 2 connections on the other. It can also provide a force-balance floating connection between multiple sails.

### Pole and footer styles library

Pole and footer libraries store user preferred pole and footer sizes and descriptions allowing adding pre-defined poles/footings which will be included in a new Post & Footer report.

### Other great new features

- Square (SHS) poles added
- "Use this view in report" now includes current zoom selection
- Layout dimensions now includes “between points” now snap to base of pole or sail corner
- New post and footer report page
- Shadow report templates now include options for color background and sails

We trust you will enjoy these new features and that they will benefit your company.

Thank you for your continued support and we again, encourage you to provide feedback and suggestions for improvements.
